## A New Approach to an Old Problem.

The Federal Procurement Data System (FPDS) is the Mount Everest of U.S. Government databases. It exceeds 100 million records in size - with more than 17 million alone in aerospace, defense, and government technology – and each containing hundreds of fields. Whether you're analyzing a competitor, a customer, or an entire market, the FPDS is the essential database for doing business in the Federal marketplace.

But there's a problem: it is huge and on its own, requires experience and expertise to make the most of it. DACIS FPDS Pro solves that challenge.

The screenshot displays the FPDS Pro interface with the following components:
